Portfolio: gilbert-trinidad.com

Product designer since 2022, web developer from 2016 to 2021. I design products from research to launch, and I can now build them by orchestrating a team of AI agents (Claude Code): I direct the AI and review every deliverable with a web developer's eye. I'm looking to join a product team in a permanent role.

SKILLS

UX design
User flows, information architecture, wireframes, prototyping, gathering user feedback

UI design
Created my own design system, used across my projects; web and mobile interfaces, visual identity, logos

UX writing
Interface and website copy, information hierarchy, brand voice

Programming languages / development tools
HTML, CSS, JavaScript, Tailwind CSS, PHP, Laravel, WordPress, WooCommerce, Elementor and Divi

EXPERIENCE

Product Designer · Self-employed, Paris — Sept. 2022 – present

End-to-end design for entrepreneurs and independent professionals, from research to live website.

Unfate · edtech startup · web app

- Created a learning app that lets teachers, companies or experts showcase their courses, whether for individuals, employees or other audiences.
- Designed the key flows with the founding team: sign-in, settings, practice and exams.

Mélodie Yeremian · career assessment and therapy · website and online shop

- Two distinct journeys so visitors don't confuse career assessment with therapy, each with its own page and discovery-call booking.
- "Book a call" button visible everywhere, personal "About me" page to build trust, and an online shop.
- Set up and deployed the site on WordPress: pages first built with Elementor, then migrated to Divi; shop with WooCommerce.

SPCoach · coach and therapist in Paris · website and booking

- One-page structure that answers the visitor's questions in order: what is it, is it for me, how does it work, how much does it cost.
- Removed barriers to first contact: clear pricing with a featured package, free discovery call, FAQ and trust signals.
- Wrote all the copy in the client's voice. Site built with WordPress and Symfony: I didn't code it, but I worked directly with the developer. The site is live and used to present her services and take bookings.

WEB DEVELOPMENT EXPERIENCE

Back-end developer · Epresspack · booking module for a SaaS — PHP, Laravel — 2021
